

# COVID-19 Response

Nexxspan Is Honored to Have the Opportunity to Work With Multiple Industry Partners to Develop Rapid Response Solutions to the COVID-19 Patient Surge.

## Synergy Med Provides Mobile, Transportable Clean Cubes Equipped with Nexxspan Equipment Rail

Health screening in a parking lot with tents is not ideal for your employees. Temperatures, precipitation, the environment and privacy can impact the comfort level for both screeners and employees.

These cubes provide safe and effective screening so employees can get back to work. By equipping the modular clinical environment with Nexxspan's equipment rail and accessories, equipment is organized and requires minimal space. Acuity can be adjusted quickly with the equipment management system allowing for a quick reconfiguration of spaces. The result is the ability to create more patient spaces to help move employees through quickly and efficiently.

## Nexxspan's Equipment Management Solutions Help Verity to Convert the CT Defense Mobile Medical Unit

Originally designed to meet military needs, these mobile medical units were redesigned for civilian medical use. This modular, advanced response vehicle can be used to accommodate additional COVID units and infusion areas or easily retrofitted in the field to accommodate higher acuity levels. The use of Nexxspan's equipment rails and accessories helps reduce the footprint area for each patient allowing for more patient treatment spaces in the mobile units. The equipment rails help reduce clutter and overall make the workspace more efficient.

## HHI Corporation Develops Mobile Triage Units Equipped with Nexxspan's Equipment Rail System

The Mobile Triage Unit was developed in response to the COVID-19 pandemic and is part of their bio-containment systems. The unit provides a secure, 100% self-sustainable area to house overflow patients during times of crisis. Each unit incorporates Nexxspan's Equipment Rail to easily mount accessories and needed medical equipment. By mounting equipment on the rail, less space is required for each patient and trip hazards are reduced.

## Nexxspan's Mobile Gas Cart Combined with Kwickscreen's Privacy Screen Can Turn Conference Rooms, Convention Centers and More Into Patient Care Spaces

As the patient population increased in hospitals throughout New York and other cities, administrators looked for alternative sites, such as the Javitz Center, to treat patients. With Nexxspan's mobile gas carts, areas such as conference rooms, convention centers and waiting rooms were converted to patient treatment areas and critical supplies and gases were easily moved where needed.

## Nexxspan Is Here To Help You Prepare For the Future

Nexxspan Healthcare specializes in equipment management, medical gas expansion and emergency preparedness solutions. We can help evaluate your current capabilities and make recommendations to help prepare for future surges in patient population.

Our medical gas headwalls, equipment rail and gas expansion systems can help convert single patient rooms, hallways and conference rooms into multi-patient treatment areas. If an off-site facility is your best option, we have a variety of carts that can help facilitate transport of gases and supplies.
